All child objects created with this function act as default templates, so we can change them in a subclass or Blueprint. If you want to move something 2 feet in Unity, it will be 0.61 units (meters). Unless you override these properties and provide your own template, Unreal Engine will use these default values to render your object. We set the default property values for the class in AMyActor's constructor. So if you move something 1 unit (meter) in Unity, this is equivalent to moving something 100 units (centimeters) in Unreal Engine. Each object class you create has a default template that contains default values for its properties and components. The base class for this is UPrimitiveComponent, which has many subclasses (USphereComponent, UCapsuleComponent, etc.) to suit your needs. Instead, use the check() function to trigger a critical assertion error. You used the Instancing function to create new instances of objects in Unity.
